ECE 2305 – Introduction to C Programming
Programming Tutorial 15
FOR Structure

Write a C++ program that uses a **`for`** loop to print n, n^2 and n^3 for n in the range from 0 to 10. Print the results in columns with the appropriate headings. Use the "tab" escape sequence (**`"\t"`**) to format the table properly.

Input

```
// ECE 2305 - Tutorial 15

#include <iostream>
using namespace std;

int main() {
    cout << "n\tn^2\tn^3" << endl;

    for (int n = 0; n <= 10; n++) {
        cout << n << "\t" << (n * n) << "\t" << (n * n * n) << endl;
    }

    system("pause");
    return 0;
}
```

Output
