ECE 2305 – Introduction to C Programming
Programming Tutorial 26
Data Structures

Write a C++ program using the keyword **`struct`** to create a compound data type for fruit. The Data Members shall include the name of the fruit (string data, "apple", "orange", etc.), the quantity of fruit (**`int`** data) and the price of the fruit (**`double`** data). Declare instances of the data type fruit and assign values to the Data Members.

Input

```
//ECE 2305 - Tutorial 26

#include <iostream>
#include <iomanip>
#include <string>

using namespace std;
struct Fruit {
    string name;
    int quantity;
    double price;
};

int main() {
    Fruit apple = { "Apple", 10, 0.99 };
    Fruit orange = { "Orange", 15, 1.25 };
    Fruit banana = { "Banana", 20, 0.75 };

    cout << left << setw(10) << "Name" << setw(10) << "Quantity" << "Price"
<< endl;
    cout << "----------------------------" << endl;
    cout << setw(10) << apple.name << setw(10) << apple.quantity << fixed <<
setprecision(2) << apple.price << endl;
    cout << setw(10) << orange.name << setw(10) << orange.quantity << fixed
<< setprecision(2) << orange.price << endl;
    cout << setw(10) << banana.name << setw(10) << banana.quantity << fixed
<< setprecision(2) << banana.price << endl;

    system("pause");
    return 0;
}
```

Output
