ECE 2305 – Introduction to C Programming
Tutorial 05
Integer, Modulo and Floating Point Division

Write a C++ program to display the results of the following operations.

```
7 / 2
7 % 2
7.0 / 2.0
```

Describe why each of the operations give different results.
Attempt the following operation and describe why it will not work.

```
7.0 % 2.0
```

Input

```
// Tutorial 05 - Int, Modulo, and Floating Pt Division
#include <iostream>
using namespace std;

int main()
{
    cout << "Operations on Division and Modulus\n\n";

    cout << "7 / 2 = " << 7 / 2 << "  (Integer division, no decimals)\n";
    cout << "7 % 2 = " << 7 % 2 << "  (Remainder after division)\n";
    cout << "7.0 / 2.0 = " << 7.0 / 2.0 << "  (Floating-point division,
includes decimals)\n";
    cout << "7.0 % 2.0 = Error (Modulus only works with whole numbers)\n";

    system("pause");
    return 0;
}
```

Output
