ECE 2305 – Introduction to C Programming
Programming Tutorial 15
FOR Structure

Write a C++ program that uses a **`for`** loop to print n, n^2 and n^3 for n in the range from 0 to 10. Print the results in columns with the appropriate headings. Use the "tab" escape sequence (**`"\t"`**) to format the table properly.

Input

```
// ECE 2305 - Tutorial 15
// FOR Structure
#include<iostream>
using namespace std;

int main()
{
	cout << "ECE 2305 - Tutorial 15" << endl;
	cout << "FOR Structure" << endl;
	cout << endl;

	cout << "n\tn^2\tn^3" << endl;
	for (int n = 0; n <= 10; n++)
		cout << n << "\t" << n * n << "\t" << n * n * n << endl;
	cout << endl;

	system("pause");
	return 0;
}
```

Output
